STOCKWISE FROM ERROR303 • PRODUCT PITCH

Explainable Inventory & Procurement for Growing SMEs

Eliminating stockouts and frozen cash flow with transparent demand mathematics and closed-loop purchasing governance.

DOMAIN TRACK

Domain 2: SME Supply Chain Digitization

THE PROBLEM

SMEs Are Trapped Between Stockouts and Frozen Capital

43%

Manual Spreadsheet Dependency

Disjointed records cause stock discrepancies.

31%

Trapped Working Capital

Blind over-ordering without lead-time insight.

0%

Procurement Audit Trail

Zero accountability before placing orders.

⚠ **Existing ERPs are overly bloated and expensive; simple tracking apps lack purchase governance.**

THE SOLUTION

StockWise: Unified Demand, Stock, & Purchasing

Multi-Tier Stock Ledger

Physical vs. reserved vs. uncommitted available.

Explainable Replenishment

Mathematical formulas replace arbitrary forecasts.

Two-Tier Role Guardrails

Staff drafts requests; owner verifies unit costs.

ENGINE ARCHITECTURE

Deterministic Math, Not Hallucinating AI

Suggested Buy = Ceiling[Max(Demand + Safety, Reorder) - (Available + Approved POs), MOQ]

No Double-Counting

Dedupes active reservations from generic burn rate.

Lead-Time Aware

Flags risks before supplier transit exceeds runway.

Supplier MOQ Rules

Rounds orders to vendor package thresholds.

A Concrete Example

Variable	Value	Explanation
Demand	80 units	Upcoming customer orders
Safety	20 units	Buffer stock
Reorder Point	70 units	Standard baseline threshold
Available	30 units	Current physical stock
Approved POs	25 units	In-transit order from last week
MOQ	25 units	Supplier only sells in packs of 25

...

1. **Target Stock:** $\max(80 + 20,\ 70) = \max(100,\ 70) = \mathbf{100}$ units
2. **Current + Pipeline Stock:** $30 + 25 = \mathbf{55}$ units
3. **Raw Deficit:** $100 - 55 = \mathbf{45}$ units
4. **Apply MOQ:** $\text{Ceiling}[45,\ 25] = \mathbf{50}$ units

$$\text{Suggested Buy} = \mathbf{50} \text{ units } (2 \text{ packs of } 25)$$

LIFECYCLE FLOW

The 5-Step Procurement Loop

PHASE 01

The Trigger

A customer order or production run is logged, automatically reserving materials.

PHASE 02

Connected Data

StockWise immediately pulls current stock, daily burn rates, supplier lead times, and open POs

PHASE 03

Draft

Staff submits operational justification.

PHASE 04

Owner Gate

Owner confirms prices and approves.

PHASE 05

Stock Receipt

The purchase order (PO) dispatches to the vendor. The system will automatically refresh the remained stock.

INTERNAL SECURITY

Separation of Duties by Design

Business Owner

Full Cost Visibility: Complete margins and valuations.

Final Decision Gate: Approve, return, or reject.

Vendor Negotiations: Override unit prices directly.

Config Mastery: Safety stocks and team management.

Floor & Warehouse Staff

Zero Price Leak: Financial figures masked by default.

Draft Requests: Input operational quantity needs.

Inventory Reception: Confirm deliveries at the loading bay.

Demand Tracking: Reserve stock for active projects.

MARKET FIT

Engineered for 6 Diverse SME Verticals

Manufacturing
Raw resin, components, packaging materials.

Retail & E-commerce
Fast-moving SKU turnover and branch replenishment.

Food & Beverage
Daily perishable ingredients and takeaway supplies.

Construction
Cement, reinforcement steel, site consumables.

Healthcare Clinics
Surgical gloves, medical consumables, sanitizers.

Education & Offices
Paper reams, IT consumables, lab supplies.

SUPPLY CHAIN INSIGHTS

Supplier Reliability & Early Risk Warnings

01

Lead-Time Benchmark Tracking

Compares quoted days with actual stock runway.

STOCK RUNWAY VS QUOTED DAYS

Quoted Lead Time: 14 Days

Actual Stock Runway: 24 Days

+10 Days Buffer Secured

02

Supplier Concentration Watch

Warns against single-vendor dependency bottlenecks.

VENDOR DEPENDENCY SPLIT

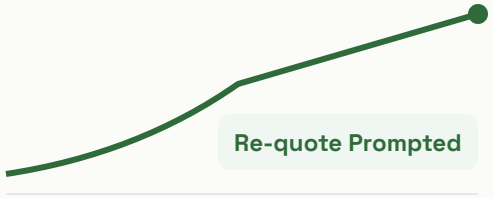

- Primary Vendor: 67% (High Dependency)
- Secondary Vendor: 23%
- Alternative Backup: 10%

03

Price Pressure Scenarios

Simulated inflation curves prompt timely quote requests.

INFLATION SIMULATION CURVE
